Pricing and system configuration	●	●	○	—	○
Configure agents and availability	●	●	○	◐	○
Create accounts / change roles	●	—	—	—	—

Access is still subject to record scope and action-specific checks. A visible menu does not grant every action within that area. Read the explanations on page 2.

What the roles mean

Owner

Full operational access, plus team-account administration and commission management. Only the owner can create accounts, change roles, revise commission rates or record commission payouts.

Manager

Broad operational and configuration access, including CRM, products, sales, invoices, cleared-payment approval and shared client templates. Does not have team-account or commission-management access.

Operations

Quotes, bookings and cleaner work. Can edit cleaner email templates. Client CRM, contract products, product sales and commissions are not available to this role. Configuration is read-only.

Regional Agent

Uses the linked regional profile and its calendar. CRM clients are individually assigned. Quotes are accessible through service-area coverage or CRM assignment. Cleaners, contract products and product sales are scoped by state, so two Melbourne agents can share access to Victorian records.

Viewer

Read-only general admin access, including dashboard, quotes, bookings, cleaner details and configuration. No Client CRM, product-sale or commission access. Can read cleaner templates but cannot edit them.

Templates and financial actions

Agents may use published shared client templates and create personal drafts, but cannot edit shared client templates. Agents can manage permitted payment plans and record payment information; cleared-payment confirmation remains an owner/manager action. Agents see their own commissions and can submit claims.

Area-first Melbourne booking setup

The suburb must first match the service areas selected on the agent's availability window. Only when both agents cover that suburb and are available at the same time does booking priority decide: 1 is the first choice. The next eligible agent is offered when the first is booked or blocked out. Priority never overrides area selection.

Separate calendars and existing records

Each agent needs a separate regional profile, calendar ID and availability windows. Priority changes do not move existing bookings or reassign existing clients. CRM assignment and the agent attending an appointment may differ when a backup agent is used; that is deliberate to preserve client ownership.

Activation and limits

The allocation change requires deployment and administrator setup before use. Existing service-area allocation remains the default until enabled. Sydney is unchanged. Calendar events entered outside this system need corresponding availability block-outs; this is not a live Google Calendar free/busy check.

Review basis

Role chart checked against production source cdca352 (29 October 2026). It documents current permissions; this work does not grant new roles or change the permission model. Booking-mode notes describe the separately requested implementation.
